PROJECTS

Project ELETRIC CAR WITH SPEHRICAL WHEELS

Period: July 2018 - June 2019

Our project will solve the real life problem of automobile vehicle, industrial, where vehicle are not able to move quickly in any direction as well as its require high torque to run so the fuel.

The Spherical Wheels are designed to get a free motion over the XY plane, which the disc wheels cannot do. They are more efficient as the force is directly applied in the required direction rather than the component of the force doing the same. This type of Wheel setup can be employed in the Industries, Homes, in the city, etc. Basically it's an EV moving on Spherical Wheels, as the electricity is the better to use rather than burning some other fuels.
