PROJECT DETAILS

➤ ROOFTOP TURBO VENTILATORS

Team size: - 4

-It was an idea of generating power from rooftop turbo which is freely moving without any energy source.

-The concept of natural ventilation without using electric energy is lead to be the roof ventilator. This technology is popular using by install on the roof in warehouse, workshop, industrial building and including to residence.

➤ POWER THEFT DETECTION AND CUTT-OFF SYSTEM

Team size:-4

-It is a system which detects any type of theft and cut it off via gsm system network.

-This presents the design and analysis of a power theft location system which alerts a Power company in the event of theft or attempted theft electrical energy. The system incorporated into an energy meter to detect when the meter cover is opened. This triggers a series of actions within the system which eventually lead to the sending of a message containing the meter number and address from which the tampering originates to a computer which will be located at the power company's office.
